### **DETAILED ACTION**

## Claim Objections

1. Claims 8,13,14,24,29,30,40,45 and 46 are objected to because of the following informalities: claims are awkwardly written, there appears to be missing words, e.g., claim 8, before *sensor*, "a" and claim 13, before *said user*, "when". Appropriate correction is required.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35
 U.S.C. 102 that form the basis for the rejections under this section made in this
 Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1,2,4,6-9,11-14,17,18,20,22-25 and 27-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Jonsson et al. (Jonsson), U.S. Patent No. 5,093,833.

Regarding claims 1 and 17, Jonsson discloses a method for device location sensitive data routing (and a device location sensitive data router) comprising:

detecting (and a detector) a signal at a location wherein said signal emanates from a portable, electronic device (i.e., reads on user's phone) wherein said signal contains a user identifier (i.e., reads on user's personal telephone

Application/Control Newper: 09/737,193

Art Unit: 2686

number) wherein said user identifier identifies a user (i.e., reads on authentication process) (col. 11,lines 32-45);

transmitting to a routing device said user identifier and a list of one or more communications devices (i.e., reads on fixed telephones) wherein said communications devices are at said location (i.e., reads on within coverage area of registration device) (col. 11,lines 40-45);

and rerouting one or more electronic communications (i.e., reads on voice call and data, see col. 4,lines 30-34) to said communications devices wherein said electronic communications are intended for said user (col. 11, lines 43-60).

Regarding claims 2 and 18, Jonsson discloses the method of claims 1 and 17,respectively,wherein said step of transmitting comprises: transmitting via a phone system (i.e., reads on PSTN) (col. 11,lines 35-38).

Regarding claims 4 and 20, Jonsson discloses the method of claims 1 and 17, respectively, wherein said portable, electronic device is a cellular phone (i.e., reads on GSM or AMPS and D-AMPS or PCS) (col. 4,lines 18-29).

Regarding claims 6 and 22, Jonsson discloses the method of claims 1 and 17, respectively, wherein said signal is a radio signal (col. 4,lines 18-29).

Regarding claims 7 and 23, Jonsson discloses the method of claims 1 and 23, respectively, wherein said signal is an infrared signal (col. 4,lines 53-57).

Regarding claims 8 and 24, Jonsson discloses the method of claim 1 wherein said signal emanates via a connection line (i.e., reads on service control module) wherein said connection line couples said portable, electronic device (mobile) and {a} sensor (i.e., reads on infrared light) (col. 4,lines 53-57).

Art Unit: 2686

Regarding claims 9 and 25, Jonsson discloses the method of claims 1 and 17, respectively, wherein said electronic communications are phone calls (i.e., voice)(col. 4,lines 30-34).

Regarding claims 11 and 27, Jonsson discloses the method of claims 1 and 17, respectively, further comprising: coupling a cellular phone to a non-wireless phone line (i.e., wire-line or fixed) (col. 4, lines 1-12).

Regarding claims 12 and 28, Jonsson discloses the method of claims 1 and 17, respectively, further comprising: configuring said routing device to perform an action (i.e., route call), if a condition is met (i.e., reads on mobile is registered with registration device) (col. 11,lines 40-60).

Regarding claims 13 and 29, Jonsson discloses the method of claim 12 wherein said condition is {when} said user first appears at said location (i.e., reads on registers with registration device) (col. 11,lines 35-52).

Regarding claims 14 and 30, Jonsson discloses the method of claim 12 wherein said condition is said user leaves said location (i.e., reads on mobile moving to a new place) (col. 11,lines 27-31).

Application/Control Number: 09/737,193

Art Unit: 2686

### Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 3,5,10,15-16,19,21,26,31 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jonsson, in view of Waites, U.S. Patent No. 6,788,769.

Regarding claims 3,5,10,15,16,19,21,26,31 and 32, Jonsson discloses the method (and router) of claims 1 and 17, respectively, but fails to show wherein said step of transmitting comprises: transmitting email messages, wherein the portable is a PDA or updating a web page.

In a similar field of endeavor, Waites discloses a mobile transmitting an transmitting via e-mail (col. 7,lines 10-65); wherein said portable, electronic device is a PDA (col. 11,lines 12-24); wherein said action is updating a web page (col. 13,lines 17-46); and wherein said action is ending an email (col. 11,lines 12-24).

At the time of the invention it would have been obvious to one of ordinary skill in the art to modify Jonsson's method and apparatus of routing calls to include an PDA, email and web page updating capabilities for the purpose of allowing the user to transmit data to other users or access data on the Internet as taught by Waites.

Application/Control Number: 09/737,193

Art Unit: 2686

6. Claims 33,34,36,38,39,40,41,43,45 and 46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jonsson, in view of Harter et al., "A Distributed Location System for the Active Office".

Regarding claims 33,34,36,38,39,40,41,43,45 and 46, Jonsson discloses the limitations just as in corresponding method and apparatus claims 1,2,4,6-9,11-14,17,18,20,22-25 and 27-30, applied above, except for specifically teaching, a computer program product comprising computer usable medium having computer readable program code embodied therein and configured to route data.

In a similar field of endeavor, Harter et al., discloses a distributed location system wherein fixed and wireless receivers are combined in a manner similar to Jonsson but within an "active office". Further, Harter et al., clearly teaches that location technology involves distributed software (i.e., reads on computer usable medium and computer readable program) throughout the local area.

At the time of the invention it would have been obvious to one of ordinary skill in the art to modify Jonsson to include distributed software for the purpose of providing control to the service node and service control module, to implement the routing of calls using intelligent technology.

7. Claims 35,37,42,47 and 48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jonsson as modified by Harter et al., in further view of Waites.

Regarding claims 35,37,42,47 and 48, Jonsson as modified by Harter et al., discloses the method of claim 33. Since Jonsson and Harter et al., do not disclose the limitations in dependent claims 35,37,42,47 and 48, Examiner has

Application/Control Namber: 09/737,193

Art Unit: 2686

added the Waites reference, applied just as above with respect to claims 3,5,10,15-16,19,21,26 and 30-32.

In a similar field of endeavor, Waites discloses a mobile transmitting an transmitting via e-mail (col. 7,lines 10-65); wherein said portable, electronic device is a PDA (col. 11,lines 12-24); wherein said action is updating a web page (col. 13,lines 17-46); and wherein said action is ending an email (col. 11,lines 12-24).

At the time of the invention it would have been obvious to one of ordinary skill in the art to modify Jonsson as modified by Harter et al., method and apparatus of routing calls to include an PDA, email and web page updating capabilities for the purpose of allowing the user to transmit data to other users or access data on the Internet as taught by Waites.

#### Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Syed et al., U.S. Patent No. 6,038,451, discloses a location based method of forwarding wireless telephone calls.

Irlam et al., U.S. Patent No. 6,50,890, discloses a value added electronic messaging services.

Paarsmarkt et al, U.S. Patent No. 6,118,856, discloses a method and apparatus for automatically forwarding an email message or portion thereof to a remote device.

Application/Control Namber: 09/737,193

Art Unit: 2686

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joy K Contee whose telephone number is 703-308-0149. The examiner can normally be reached on M (alternating), T & Th, 5:30 a.m. to 2:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marsha Banks-Harold can be reached on 703-305-4379. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
